Qualities

Ambitious and driven software developer who excels in diving in diving into a task and completely focus on this. Besides this I'm a great instructor therefore I'm always there to help my fellow co-workers. I have a knack for structure therefore I'm a tight planner and a nitpicker for structured code.

Areas of Expertise

- ASP.net
- C#
- Working with frameworks
- Java (JavaFX and Swing)
- MySQL Database
- Oracle Database

- HTML
- CSS
- JavaScript
- JQuery library
- Software Engineering capabilities

Degrees

Havo at Elde College Schijndel
The Dutch equivalent of high school diplomas in the case you aren't familiar with this please have a look at this link: https://en.wikipedia.org/wiki/Education_in_the_Netherlands

Tutoring certificate at Avans University of Applied Sciences
Past year I took a workshop in tutoring and how to give good feedback to your fellow students.

Languages

Dutch: My mother language where I've been born and raised with.

English: Second language which I spent many hours trying to master. Besides minor flaws I speak English fluently.

German: Small understanding of German and speak it just enough to make myself clear.

- Responsible for cooling section
- Led small team

Personal Interest

Who am I?

I'm Max Beekmans a 20 year old male born and raised in the Netherlands. I've been fascinated about tech since an early age which is what brought me to my current school. The Avans University of Applied Sciences where I'm a fulltime Computer Science student. I spend my days programming and managing projects. However I'm completely in my element when I can focus on my code.

Not only is my interest from tech been with me since an early age also the will to move to the United States of America to come and preform the skill I'm acquiring. The United States has been the innovator of all the great tech therefore it's the ultimate goal to eventually be part of these great teams and contribute my own part to these wonderful products.

Interest and ambitions

Huge audiophile who loves to play guitar and collect records. In my spare time you can find me either programming while listening to these records or playing videogames. In the future I'd love to combine my interests for videogames or music with my work. However this is not my only ambition! Developing an Android app is also still on my list.
